

MICHAEL CHEGE

Software Engineer | Backend-Focused Developer

Limuru, Kiambu, Kenya | +254 743 141 204

mikechege171@gmail.com | www.itsmikepage.tech

PROFESSIONAL SUMMARY

Detail-oriented Software Engineer with strong backend training and practical experience supporting production systems in high-availability environments. Experienced in system logic, APIs, SQL databases, and structured problem-solving gained through intensive backend engineering training and real-world technical operations. Adept at gathering requirements, troubleshooting complex system issues, documenting processes, and collaborating across technical and non-technical teams. Strong foundation in algorithms, data structures, and scalable system design principles.

TECHNICAL SKILLS

Programming & Frameworks: Java (Spring Boot – foundational), JavaScript (ES6+), REST APIs

Frontend Exposure: ReactJS (foundational)

Databases: SQL, relational database design, data modeling concepts

Systems & Tools: Git, Linux, Windows, REST clients, remote support tools

Engineering Practices: Unit testing concepts, debugging, root-cause analysis, documentation

Core CS Knowledge: Data structures, algorithms, system logic, API architecture

WORK EXPERIENCE

L2 Technical Support Specialist (IT Technician)

Bobtech Engineers | 2025–Present

- Analyze and resolve complex system and network incidents through structured debugging and backend analysis.
- Collaborate with cross-functional teams (NOC, field engineers, operations) to gather requirements and implement technical resolutions.
- Conduct root-cause analysis on recurring system issues and recommend long-term technical improvements.
- Maintain documentation of system configurations, troubleshooting procedures, and resolution workflows.

- Provide technical guidance and system training to field partners and internal stakeholders.

Technical Support Assistant / Operations

Advacom Limited | 2023–2025

- Supported customers with technical product and system-related inquiries in a fast-paced B2C environment.
- Assisted in tracking operational workflows and maintaining structured documentation.
- Strengthened stakeholder communication skills by translating technical concepts for non-technical users.

PROJECT EXPERIENCE

Backend API Development (ALX Africa)

- Designed and implemented RESTful APIs following MVC architecture principles.
- Modeled relational databases and structured logical data flows for application requirements.
- Applied data structures and algorithms to optimize performance and improve efficiency.
- Practiced version control workflows and collaborative code management.

EDUCATION

Software Engineering (Backend Specialization)

ALX Africa | 2023–2024 | GPA: 4.0

KCSE

Ngenia High School | 2017–2020

ADDITIONAL INFORMATION

- Languages: Fluent in English and Swahili
- Strengths: Detail-oriented, data-driven decision making, strong problem-solving ability, collaborative team player
- Practical engineering experience gained through structured bootcamp training and hands-on technical roles
